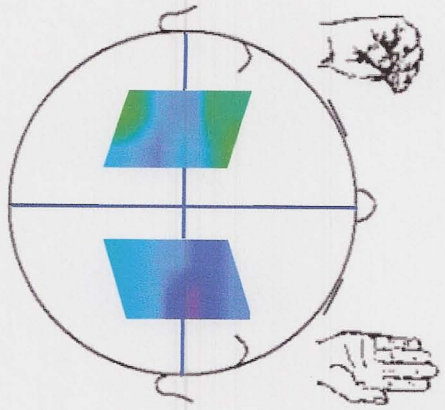
RESEARCH STUDY – NEAR INFRARED SPECTROSCOPY OF BRAIN FUNCTION



Adults above the age of 18 are asked to participate in a research study of a new system designed to measure brain activity. The study consists of a series of measurements taken during one or more of a variety of tasks – including finger-tapping exercises and responding to input such as simple pictures or recordings of words or tones.

Participants must have no history of brain trauma or neurological or psychiatric disorders. The study will take place at Massachusetts General Hospital East at the Charlestown Navy Yard and includes a payment of $20 per hour as well as a sticker for the Charlestown Navy Yard parking garage.

For further information, contact Christy Wanyo at 617-726-2972, or visit http://www.nmr.mgh.harvard.edu/DOT/home/studies.htm.
