

Table of Contents

I Preliminaries	1
1 Introduction to microwave imaging	2
1.1 Introduction	2
1.2 Cell biology of cancer and introduction to breast cancer	4
1.2.1 Biology of cancer	5
1.2.2 Breast cancer	7
1.3 Microwave imaging	9
1.3.1 Overview	9
1.3.2 History	15
1.3.3 Microwave imaging system at Dartmouth College	19
1.3.4 Principle of data acquisition in microwave imaging	24
1.3.5 Overview of the image reconstruction algorithm	27
1.4 Hypotheses and aims	32
2 Mathematical foundations for microwave imaging	37
2.1 Non-diffracting source tomography	38
2.2 Diffracting source tomography	40
2.3 Nonlinear optimization	44
2.4 Ill-posedness and regularization	50

TABLE OF CONTENTS

2.4.1	Linear ill-posed problems	50
2.4.2	Nonlinear ill-posed problems	56
2.4.3	Differences between the Levenberg-Marquardt method and non-linear Tikhonov regularization	58
2.5	Nonlinear parameter estimation	59
2.6	Summary	63
II Image reconstruction algorithms		65
3 Dual-mesh based 2D reconstruction algorithms		66
3.1	Introduction	66
3.2	Regularized Gauss-Newton iterative reconstruction	67
3.2.1	Forward equations	67
3.2.2	Computational methods for evaluating forward problems	71
3.2.3	Gauss-Newton method	75
3.2.4	Flow chart of the regularized Gauss-Newton method	81
3.3	The dual-mesh scheme	81
3.4	2D scalar forward field coupled with 2D parameter reconstruction	86
3.4.1	Finite element region	88
3.4.2	Boundary element region	90
3.5	Building the Jacobian matrix	92
3.6	2D FDTD forward field solution coupled with 2D parameter reconstruction	93
3.6.1	2D FDTD method	95
3.6.2	2D FDTD forward method coupled with 2D reconstruction	122
3.7	Results	123

TABLE OF CONTENTS

3.7.1	Simulations	125
3.7.2	Phantom experiments	131
3.7.3	<i>In vivo</i> animal measurement reconstructions	135
3.7.4	Patient data reconstructions	139
3.8	Conclusions	142
4	3D scalar field driving 2D reconstruction algorithm	144
4.1	Theory and techniques	145
4.1.1	Forward problem	147
4.1.2	Image reconstruction and the dual-mesh adjoint method	153
4.2	Results	157
4.2.1	Simple cylindrical phantom	159
4.2.2	Breast-like cylindrical phantom	160
4.2.3	Reduction in 3D propagation effects	162
4.3	Conclusions	165
5	Three dimensional microwave imaging	168
5.1	Theory and method	169
5.1.1	3D dual-meshes	171
5.1.2	Nodal adjoint method	173
5.1.3	3D vector forward solution coupled with 3D reconstruction	176
5.1.4	Accuracy of the 3D FDTD solver for lossy media	184
5.1.5	Computational complexity comparison to 3D FE/BE method	185
5.1.6	Enhancement of the 3D vector forward solver	188
5.1.7	ADI FDTD with lossy UPML absorbing boundary condition	193
5.2	3D microwave imaging system prototype	195

TABLE OF CONTENTS

5.3	Results	196
5.3.1	Simulated data reconstructions	198
5.3.2	Measured data reconstructions	206
5.3.3	Comparisons of all dual-mesh based algorithms	210
5.4	Discussions and conclusions	212
6	Multiple-frequency dispersion reconstruction algorithm	214
6.1	Introduction	215
6.2	Theory	216
6.2.1	Multiple frequency dispersion reconstruction algorithm	216
6.2.2	Dispersion model	220
6.2.3	Row and column weighting	221
6.2.4	Time-domain forward computation	223
6.3	Results	224
6.3.1	Simulation experiments	226
6.3.2	Phantom experiments	230
6.4	Discussions and conclusions	232
7	Singular value analysis of the Jacobian matrix	237
7.1	Introduction	237
7.2	Analytical SVD of the Jacobian matrix	239
7.3	Jacobian SVD over a circular parameter domain	244
7.4	Numerical SVD and the degree of ill-posedness	247
7.5	Discussions and conclusions	253

III	Phase unwrapping and phase singularities	254
8	A mathematical framework of phase unwrapping	255
8.1	Introduction	256
8.2	A mathematical framework of phase unwrapping	258
8.2.1	Phase function and the single-valued interval	258
8.2.2	Path and Phase unwrapping integral	260
8.2.3	Properties of the phase unwrapping integral	262
8.2.4	Closed path phase unwrapping integral in \mathbb{R}^n space	268
8.2.5	Static and dynamic phase unwrapping problems	271
9	Phase singularities in microwave scattering problems	274
9.1	Scattering nulls in 2-D problems	275
9.2	Phase unwrapping in 2-D scattering fields	279
9.3	Phase unwrapping in 3-D scattering fields	279
10	Phase unwrapping in microwave imaging	282
10.1	Method	282
10.2	Results	285
10.2.1	Reconstruction with the presence of scattering nulls	285
10.2.2	Reconstruction with intermediate nulls	288
10.2.3	Reconstruction of patient measurement	291
10.3	Conclusions	294
A	Mathematica code for the ADI FDTD method update equations	295
B	Statistical analysis on the reconstruction algorithm	300
B.1	Analysis of the raw measurement	302

TABLE OF CONTENTS

B.2 Analysis on residual error	308
C 3D FDTD modelling of the illumination tank	310
D Iso-sensitivity ovals and surfaces	313
E Proof of the nodal adjoint matrix reconditioning	316
F Common methods in computational electromagnetics	318
Bibliography	320
